Off-grid project facilities have an equivalent off-grid capacity of a 1400 square foot home. When you rent this product, not only are you saving at least 90% of the fuel required to run a generator full time, you are also eliminating the need for an additional rental of a generator.

Our team will deliver the facility to your site, set it up, and provide a brief instructional session on what you can expect while renting this facility. The facility also comes with an optional satellite internet connection to provide a complete turnkey setup for your project office.
